REVISED

**Re: Judicial Retirement System and National Guard and
Naval Militia Retirement System Roll-Forward Actuarial Valuations as of June 30, 2009**

Dear Pat:

We have revised the roll-forward actuarial valuations for the State of Alaska Judicial Retirement System (JRS) and the National Guard and Naval Militia Retirement System (NGNMRS) as of June 30, 2009. We have made a correction to the total normal cost amount for JRS, resulting in a slight decrease from \$4,239,822 to \$4,199,560. The contribution rates remain unchanged. The valuations have been performed by a projection or "roll forward" of liabilities from the last valuation date of June 30, 2008 to June 30, 2009. A summary of our results and methods is included in this letter.

RESULTS

The actuarial valuation produced an increase of 11.87% in the employer contribution rate for JRS and a slight decrease of \$69,764 in the contribution for NGNMRS. A full description of the results can be found in the attachments. A summary of the results are as follows:

	<u>June 30, 2008</u>	<u>June 30, 2009</u>
Judicial Retirement System	36.20%	48.07%
National Guard and Naval Militia Retirement System	\$965,329	\$895,565

ACTUARIAL ASSUMPTIONS AND METHODS

In lieu of collecting new data as of June 30, 2009 and performing a full actuarial valuation, it is an acceptable practice to project or "roll forward" liabilities calculated in the last complete valuation as of June 30, 2008 to June 30, 2009 by assuming the actuarial assumptions during the year are exactly realized. This process produces liabilities and normal costs which reflect the best available estimates of the major factors that would be reflected in a full actuarial valuation, including salary increases, cost of living adjustments and increases in medical costs. All data, actuarial assumptions, methods and plan provisions are the same as those used for the June 30, 2008 valuation unless otherwise noted in this letter, including a valuation interest rate of 8.25% for JRS, a valuation interest rate of 7.25% for NGNMRS, and salary scale for JRS of 4.00%.

Mr. Pat Shier

Page 2

The actuarial value of assets was calculated as of June 30, 2009 using actual assets and cash flows during the year. We are phasing in the five-year smoothing method, and investment gains experienced during FY09 are recognized at 20%.

Contributions during the year were more than the 2008 actuarial valuation requirement creating actuarial gains on both plans. However, large investment losses were experienced during the year by JRS, with a smaller investment loss experienced by NGNMRS. The net result was an overall actuarial loss for JRS and an actuarial gain for NGNMRS. The net actuarial loss for JRS was \$23,122,000, and the net actuarial gain was \$250,000 for NGNMRS. The net actuarial loss for JRS has the effect of increasing the unfunded liability from what was expected while the net actuarial gain for NGNMRS has the effect of decreasing the unfunded liability. Given the differences between actual and expected contributions and investment return, this results in changes in the employer contributions from the previous year.

Please let us know if you have any questions.

Sincerely,

David H. Sliskinsky, A.S.A.
Principal and Consulting Actuary
